

The California Hydrogen Highway

May 20, 2004

California Environmental Protection Agency

Air Resources Board

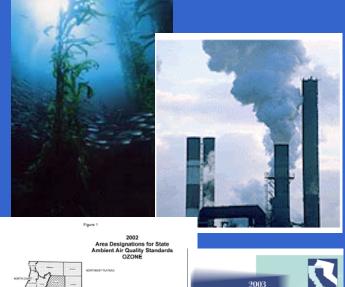

Overview

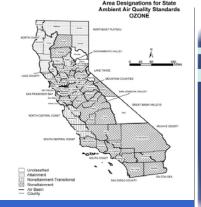

- Why hydrogen and context
- Governor's Hydrogen Economy **Blueprint Plan**
- Recent announcements
- Conclusion

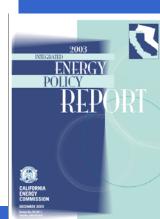

Why does CA need Hydrogen Highways?

- Environment
 - Cars-- large source of pollution
 - Petroleum dependence-- multi-media pollution impacts
- Health
 - 1.7 million respiratory attacks and 6,500 deaths attributed to air pollution annually in California
- Economy
 - Sustainable fuel supply
- Energy
 - Recent electricity shortages; California must develop renewable, reliable, distributed generation

California Hydrogen Highways

www.hydrogenhighway.ca.gov

Context

- Near term-- education
 - Driver education
 - Encourage alternatives to single occupancy
- Mid term-- conservation
 - Improved fuel economy
 - Hybrid vehicles
- Long term-- H2 economy
 - Hydrogen highway
- Focus today -- CA H2 Highway effort

Current Efforts

- California has continually been on the leading edge of protecting public health & moving towards energy independence
- Environmental
 - ARB's LEV/ZEV regulations
 - ARB's Climate Change regulations
- Energy Independence
 - ARB/CEC 2076 report
 - CEC IEPR

California Fuel Cell Partnership

- Formed January 1999
- Members include
 - Fuel cell and vehicle manufacturers
 - Energy providers
 - Government agencies

California Stationary Fuel Cell Collaborative

- Formed June 2001
- 20 member agencies/organizations
 - State, local, federal, and non-governmental organizations

Hydrogen Highway

- Hydrogen Highway
 - Establish convenient fueling for consumer hydrogen vehicles by 2010

- Public/private partnership up to 200 stations
- Fixed stations + energy stations
- Portable units

Governor Arnold Schwarzenegger's "Hydrogen Highways Plan"

- A baseline network of hydrogen fueling and electrical generating stations along CA's Interstate Highway System by 2010.
- Hydrogen production from renewable resources: farm waste, green waste, solar/waste water projects, existing H₂ capacity.

Demonstrating H₂ infrastructure

California Hydrogen Economy Blue Print Plan

- Cal/EPA shall develop a Hydrogen Economy Plan by January 1, 2005, that will accelerate hydrogen use:
- THE THE PARTY OF T
- Incentive and financing mechanisms
- Public and private partnerships
- Promoting environmental and economic benefits
- Ensuring lowest possible greenhouse and other air pollution emissions

Executive Level Panel to Direct the Blueprint Effort

- Cal EPA Agency Secretary Tamminen will Chair the Panel
- The Panel will receive input from experts on various specific topics
- The Panel will report to a Senior Review Committee that includes Agency Secretary Tamminen and Legislators

Who are our partners?

- Public Sector
 - Sister agencies
 - Regional agencies
 - International agencies
- Fuel suppliers
- Automakers
- Biomass projects
- Big-box retailers: solar panels on flat roofs and hydrogen stations in parking lots

How do we pay for it?

- The Partners are contributing most of the cost and human resources
- CalEPA, CARB, CEC and other gov't agencies are providing human resources
- Federal hydrogen funds are needed
- Once commercialized, the marketplace can take over, assisted by revenue bonds

DOE H2 Awards in CA

- H2 fleet and infrastructure demos.
 - 4 of 5 awards involve demonstrations in CA
- H2 storage projects and centers of excellence
 - 6 CA universities
 - 3 CA-based DoE National Labs
 - 3 private sector firms
- FC research 3 private sector firms
- H2 education development UC Berkeley

Industry Support

- DCX, Ford, Honda, GM, Toyota, Nissan, Hyundai - DOE grants for demo projects
- BP, ConocoPhillips, Shell, Texaco DOE grants for demo projects
- BMW H2 ICE available in 2007

Conclusion Near Term Needs - Long Term Vision

- We will not back down on any of our current programs/goals
- We must act today to protect human health and the environment now and in the long term
- Air quality and climate change point to

need for H₂ future

Renewable H₂ desired
